## **The Design Concept Based on Research Section**

The structure of all the main pages is consistent, with each relevant page being designed with a menu bar and footer. header includes a logo on the left, a menu bar on the right and a login button. The design is similar to the three examples in the research section. The poster is tightly linked to the header and has no margin, the title of the page is displayed in the top left corner of the poster, for example, the home page is labelled 'Group Name', this promotional design is similar to the Adelaide University Clubs and USU Homepage. The design will be established by creating hyperlinks and buttons to images, for example, by clicking on any image in the 'Recommended Clubs' section will hyperlink to the relevant sub-page of Clubs. three examples of the research section have been designed into this structure.

The design of the Event and Clubs is based on the 'YouX Event' and the 'the University of South Australia events' pages, with the search bar positioned centrally underneath the poster and all relevant events images listed below in a row of 4 images.

'About Us' has been designed to simply display text about the site, as is commonly the case. But perhaps its background image will be innovated in our future innovations. Finally, the 'return to home' button does not appear in our research, but is our own idea, which we think will make the site easier and faster to use for the user.

The 'Contact' page was inspired by a reference to USU's 'Contact' page. We chose to put this page in the menu bar rather than in the footer like USU because, from previous experience, users have always been confused or unsure of how to contact the site and its organisers with various issues. We have designed this page to address the root of this problem, so that all kinds of questions are posted to the admin interface and are promptly categorised and answered.

The login function is an essential feature of every club website. We have retained the same necessary information input as for other websites, such as username and password. However, we have added to this an authentication system that can jump directly to the admin and manager.

The profile page is used to display user information, and because it requires a connection to the database to be built, it has been designed for the time being as a sketch with some basic functionality. However, by referring to YouX's 'Profile' page, we decided to focus on the two main sections of the user menu and user details in the future, and to provide the ability for users to change their own information.
